

MedaSync Launches New Medicaid Reimbursement Software Enhanced to Support PDPM

February 20, 2024 | Source: MedaSync, Inc.

CLEVELAND, February 20, 2024 – The removal of section G from the MDS item set in October 2023 ushered in a new reimbursement era for many state Medicaid programs. Nearly twenty states will or have transitioned to a PDPM based model while fifteen decided to maintain their current RUG-based structure. In this era of evolving reimbursement complexity at the state level, MedaSync is proud to introduce the newest update to its all-payer reimbursement software solution now tailored to include the acuity adjusted case-mix index (CMI) systems for each state – PDPM Nursing, PDPM Nursing & NTAs, RUG IV or RUG III.

“What happened last year created a sea change for many state Medicaid programs,” stated Ryan Edgerly, CEO at MedaSync. “Newly minted case-mix states like Massachusetts now have to factor in how acuity variations will drive their Medicaid mix and the processes they now need to successfully accomplish that. And, for traditional case-mix states like Ohio, Virginia, Kansas, Iowa or Kentucky a move from a RUGs IV or III grouper to PDPM’s nursing component means less reliance on rehab and more emphasis on acuity capture. In both cases, this puts more burden on the MDS team’s ability to swiftly capture a complete picture throughout the case load and in between assessment windows.”

“MedaSync has given serious time-saving benefits for staff and peace of mind for management,” says Kim Majick, Carespring Healthcare Management’s Chief Development Officer. “We operate in two states that are in the process of converting from a RUG III or IV based system to PDPM-nursing. MedaSync easily accommodated the transition and continues to support us across our entire payer mix.”

MedaSync – Your MDS Safety Net

MedaSync software is the industry’s first AI-driven reimbursement software, offering Skilled Nursing Facilities (SNF) the simple, proactive solutions they need to improve MDS management and operational efficiency across their entire payer mix. Offering continuous intelligence, the software plugs into the EHR to monitor live patient data such as orders, activities of daily living, resident function, therapy delivery, progress notes, assessments and much more. This automated, daily monitoring provides reimbursement teams with curated patient summaries and interventional alerts that proactively pinpoint patient documentation and changes important to reimbursement for the variety of payers most operators encounter – Medicaid, Managed Care and traditional Medicare.

About MedaSync, LLC.

Offering the industry’s first reimbursement software driven by big data and Artificial Intelligence MedaSync helps post-acute operators proactively improve their reimbursement potential across all-payers while creating efficiency and making life easier for MDS coordinators and Case Managers.
